NBS Data Documentation Reports

The following publicly available reports are available from SSA through its website (https://www.ssa.gov/disabilityresearch/nbs_round_6.htm):

- **User's Guide for Restricted- and Public-Use Data Files** (Callahan et al. 2021). This report provides users with information about the restricted-use and public-use data files, including construction of the files; weight specification and variance estimation; masking procedures employed in the creation of the Public-Use File; and a detailed overview of the questionnaire design, sampling, and NBS–General Waves data collection. The report provides information covered in the Editing, Coding, Imputation and Weighting Report and the Cleaning and Identification of Data Problems Report—including, procedures for data editing, coding of open-ended responses, and variable construction—as well as a description of the imputation and weighting procedures and development of standard errors for the survey. In addition, this report contains an appendix addressing total survey error and the NBS.

- **NBS Public-Use File Codebook** (current report). This codebook provides extensive documentation for each variable in the file, including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes for variables on the public-use file. The codebook also includes frequency distributions and means as appropriate.

- **NBS–General Waves Questionnaire** (Callahan et al. 2019). This document contains all items on Round 6 of the NBS–General Waves and includes documentation of skip patterns, question universe specifications, text fills, interviewer directives, and checks for consistency and range.

- **Editing, Coding, Imputation, and Weighting Report** (Grau et al. 2019). This report summarizes the editing, coding, imputation, and weighting procedures as well as the development of standard errors for Round 6 of the NBS–General Waves. It includes an overview of the variable naming, coding, and construction conventions used in the data files and accompanying codebooks; describes how the sampling weights were computed to the final post-stratified analysis weights for the representative beneficiary sample; outlines the procedures used to impute missing responses; and discusses procedures that should be used to estimate sampling variances for the NBS.

- **Cleaning and Identification of Data Problems Report** (McDonald et al. 2019). This report describes the data processing procedures performed for Round 6 of the NBS–General Waves. It outlines the data coding and cleaning procedures and describes data problems, their origins, and the corrections implemented to create the final data file. The report describes data issues by sections of the interview and concludes with a summary of types of problems encountered and general recommendations.

- **NBS Nonresponse Bias Analysis** (Grau 2019). This report discusses whether the nonresponse adjustments applied to the sampling weights of Round 6 of the NBS-General Waves appropriately accounted for differences between respondents and nonrespondents or whether the potential for nonresponse bias still existed.

The following restricted-use report is available from SSA through a formal data sharing agreement:

- **NBS Restricted-Access Codebook** (McDonald et al. 2021)**.** This codebook provides extensive documentation for each variable in the file, including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes for variables on the restricted-access file. The codebook also includes frequency distributions and means as appropriate.

I. Introduction

The National Beneficiary Survey-General Waves (NBS-General Waves), sponsored by the Social Security Administration's (SSA's) Office of Retirement and Disability Policy, collects data on the employment-related activities of working-age beneficiaries of Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI). In 2017, Mathematica conducted the sixth round of data collection since the NBS began in 2004, and we will implement a seventh round in 2019. The first four rounds of the survey—in 2004, 2005, 2006, and 2010—helped glean information about beneficiary impairments; health; living arrangements; family structure; occupation before disability; and use of non-SSA programs (for example, the Supplemental Nutrition Assistance Program, or SNAP). Rounds 1–4 also evaluated the Ticket to Work and Self-Sufficiency (TTW) program. In Rounds 5–7, we seek to uncover important information about the factors that promote beneficiaries' self-sufficiency and, conversely, the factors that impede beneficiaries' efforts to maintain employment.[1]

For Round 6 of the NBS, we met the goals of the study through two samples: (1) a sample of all beneficiaries (the Representative Beneficiary Sample, or RBS), and (2) a sample of a subset of beneficiaries who maintained a minimum level of earnings for a sustained period (a "successful worker" sample, or SWS). Both of these cross-sectional samples were conducted simultaneously, with a subset of SWS cases to be followed longitudinally in Round 7. Mathematica collected data by using computer-assisted telephone interviewing (CATI). We deployed in-person field locators to follow-up with CATI non-respondents and conducted computer-assisted personal interviewing (CAPI) with sample members who preferred or needed an in-person interview to accommodate their disabilities. The CATI and CAPI modes were fully integrated to simplify reporting and data processing.

This codebook aims to assist with data analysis of the Round 6 NBS. It provides an overview of the NBS, including the data collection procedures, sample design, final response rates, and the survey instrument. The codebook provides extensive documentation for each variable in the file, including variable name, label, position, variable type and format, question universe, question text, number of cases eligible to receive each item, constructed variable specifications, and user notes for variables on the restricted access file. The codebook also includes frequency distributions and means as appropriate.

A. Data Collection Overview

We executed the NBS-General Waves as a dual-mode survey. Initial attempts to interview respondents used computer-assisted telephone interviewing (CATI). If Mathematica could not locate and contact a sample member by telephone, we deployed a field locator to make contact in person (for SWS clustered and RBS cases). Once located, the field locator attempted to facilitate an interview with the sample member via CATI, using a Mathematica-provided cell phone to call into the data collection center (or the sample member's own phone, if preferred). If a sample member could not complete the interview by telephone in this manner due to his or her disability, or requested an in-person interview, trained field staff conducted the interview in person using computer-assisted personal interviewing (CAPI). We reserved the CAPI mode for situations in which respondents were unable to complete the interview by telephone. To reduce measurement error, the survey instrument was identical in each mode.

---

[1] In this report, we refer to the NBS rounds conducted in 2004, 2005, 2006, 2010, 2015, and 2017 as Round 1, Round 2, Round 3, Round 4, Round 5, and Round 6 respectively. We refer to the planned 2019 round as Round 7.

If a sample member was not able to participate in the survey because of his or her disability, Mathematica sought a proxy respondent. If no proxy was available and an in-person interview was not possible, we classified the final status of the case as a nonresponse.

To promote response among Hispanic populations, we translated the questionnaire into Spanish. For languages other than English or Spanish, interpreters, if available in the sample person's home, helped to conduct the interview. If no one in the household was available to interpret for the respondent, then we flagged the case as a "language barrier." We elected not to use an interpreter service to help contact and complete these cases, as we did not have a sufficient number in any language that made it cost effective to do so. At the conclusion of Round 6 data collection, we final statused 92 cases as language barriers. We made a number of additional accommodations for those with hearing or speech impairments, including using a telecommunications relay service (TRS) and amplifiers.

We began CATI data collection in February 2017.[2] In April 2017, Mathematica began in-person locating and interviewing and CAPI which continued concurrent with CATI interviewing through November 2017. The NBS–General Waves Round 6 sample comprised 21,218 cases, 7,947 in the RBS and 13,271 in the SWS. In total, Mathematica completed 8,589 interviews (including 131 partially completed interviews).[3] We deemed an additional 290 beneficiaries from the RBS and 463 successful workers as ineligible for the survey.[4] Because of the independence of the RBS and SWS sample selections and the independence of the clustered and unclustered sample selections within the SWS, individuals could be selected for more than one sample. Therefore, after removing duplicates, the number of unique completed interviews was 8,410. Even though duplicates exist within the SWS, and in the combined sample of the SWS and RBS, each of these records are valid and should not be deleted. The weights properly account for the duplication. Across both samples, Mathematica completed 8,402 interviews by CATI and 8 by CAPI.[5] We completed proxy interviews for 1,090 sample members in the RBS, and for 409 sample members in the SWS, for a total of 1,499 proxy interviews across the two sample groups. Additionally, we completed 280 interviews in Spanish, 129 in the RBS and 151 in the SWS. The weighted response rates for the representative beneficiary sample and the successful worker sample were 58.8 and 41.3 percent, respectively. More information about sample selection and sampling weights is available in Grau et al. (2019).

B. NBS–General Waves Sample Design Overview

For all survey rounds, the NBS used a multistage sampling design for both the RBS and SWS, with an independently drawn supplemental single-stage sample for some successful worker populations. In

---

[2] We began interviewing approximately eight months after the sample was selected.

[3] We considered partial interviews completed if responses were provided through Section G of the interview.

[4] Ineligible sample members include those who were deceased, incarcerated, in active military, or no longer living in the continental United States as well as those whose benefit status was pending at the time of the interview. For the SWS, ineligibles also included sample members who had not worked in the past six months at the time of the interview.

[5] We reserved CAPI mode for special situations in which respondents were unable to complete the interview by using another method; only eight respondents requested an in-person interview. Of the 8,402 CATI completes, 1,396 were call-ins from the field that were a direct result of field locating (the field locator was with the respondent, and they both called into the SOC together), while another 531 were sent to the field at some point (the case was assigned to a field locator who may have knocked on doors, left flyers, and/or even talked to the sample member at some point, but the completed interview happened without the field locator being there).

Round 6, we drew the SWS and RBS independently, from separate frames, although the SWS frame was a subset of the RBS frame.

For the RBS in Round 6, we fielded a nationally representative sample of 7,947 SSA disability beneficiaries. Except for the way we stratified the sample of the PSUs, the sample design for the RBS was nearly identical to the design of the RBS in the Rounds 1 through 5. The target population for the RBS consisted of SSI recipients and SSDI beneficiaries between the ages of 18 and full retirement age who resided in all 50 states and the District of Columbia, excluding outlying territories, and who were in an active pay status as of June 30, 2016. As of that date, the target population consisted of approximately 13.9 million beneficiaries. As in prior rounds, we stratified the cross-sectional RBS by four age-based strata within the PSUs: (1) 18- to 29-year-olds, (2) 30- to 39-year-olds, (3) 40- to 49-year-olds, and (4) 50-year-olds and older. To ensure a sufficient number of persons seeking work, we oversampled beneficiaries in the first three cohorts (18- to 49-year-olds). The target number of completed interviews for Round 6 was 1,111 beneficiaries in each of the three younger age groups. For those age 50 and older, the target number of completed interviews was 667 beneficiaries. We summarize the actual sample sizes and number of completed interviews for both the RBS and SWS under the revised Round 6 design in Table I.1.

The SWS was limited to SSI and SSDI beneficiaries who were eligible for the RBS, but were considered "successful workers" because their earnings for a sustained period were sufficiently high. In particular, the SSI/SSDI beneficiaries were required to (1) have earnings above SSA's non-blind substantial gainful activity (SGA) monthly earnings level ($1,130 in 2016 and $1,170 in 2017) for a minimum of three consecutive calendar months at any time between August 1, 2016, and July 31, 2017, and (2) be less than 62 years old on June 30, 2016. The successful work must have occurred within a time frame so that the vast majority would be interviewed within six months of the end of their successful work (if they were not currently working), and their earnings had to have been revealed in the Disability Control File (DCF) at the time of data extraction—removing from the population any successful workers who had a long delay in having their earnings recorded on the DCF. Using these constraints to define the target population, we identified a population of 89,936 successful workers.[6] From this frame, we fielded a nationally representative sample of 13,271 successful workers. We included a screening question as an additional constraint: the sampled successful workers had to indicate that they had been working in the past six months. To ensure a large enough number of successful workers for sampling, we selected seven samples of successful workers from seven successive mutually exclusive frames. The SWS sampling frames were all subsets of the same sampling frame used for the Round 6 RBS sample, and are therefore referred to as "extracts" from the larger frame. Within each of the seven extracts, we stratified the SWS into two strata defined by beneficiary type (SSDI only, and SSI, which included both SSI only and concurrent beneficiaries).

Because of the concerns about the number of successful workers within strata and their distribution across PSUs within each extract, we decided to supplement the main SWS (within the PSUs) with a second

---

[6] This population of successful workers was provisional. It did not include successful workers whose earnings were not included in the DCF at the time of extraction due to a lag in the posting of earnings for some beneficiaries, and also included a small number of cases that met the successful work criteria at the time of extraction, but were later found to not meet the criteria. In an updated extraction from November 2020, the actual number of successful workers was found to be 288,576. Weights poststratified to this new total (R6_WTR6_SWS) and the new compsite weights (R6_WTR6_COM) are included on this public use file. The previous weights are also included in this file (R6_WTR6_SWS_PROV and R6_WTR6_COM_PROV) as well as the November 2020 flag for successful work (R6_FLAG_REALSW).

independent sample of successful workers. This supplemental sample was divided into two geographic strata (successful workers residing in a PSU, and successful workers not residing in any of the PSUs). We refer to the initial sample design as the "clustered" sample, and to the second independent sample as the "unclustered" sample. We call the combination of data from the clustered and unclustered samples to calculate estimates a "paired" sample design. The clustered sample included in-person follow-up for sample members who could not be located or otherwise did not respond by phone; the unclustered sample did not have in-person follow-up. We created a single set of composite weights (R6_WTR6_SWS) that combined information from the clustered and unclustered SWS, appropriately accounting for the different follow-up rules between the two samples. Table I.1 includes the total across the two samples in the SWS,and does not break out the counts between clustered and unclustered samples; it also does not account for the fact that 490 cases are duplicates.

For analysts who need sample information from both the RBS and SWS, we created another set of composite weights (R6_WTR6_COM) that combined information from these two samples, appropriately accounting for any overlap between them.

Table I.1. NBS–General Waves (RBS and SWS) Round 6 Actual Sample Sizes, Target Completes, and Completes

Sampling strata	Selected sample size	Original target completed interviews[a]	Actual completed interviews
Representative Beneficiary Sample	7,947	4,000	4,002
18- to 29-year-olds	2,356	1,111	1,120
30- to 39-year-olds	2,243	1,111	1,081
40- to 49-year-olds	2,153	1,111	1,129
50-year-olds or older	1,195	667	672
Successful Worker Sample			
December 2016 extract	2,647	631	982
SSDI only	1,123	250	397
SSI (SSI only + concurrent)	1,524	381	585
January 2017 extract	2,096	737	723
SSDI only	1,017	344	336
SSI (SSI only + concurrent)	1,078	393	387
March 2017 extract	1,890	773	739
SSDI only	873	373	350
SSI (SSI only + concurrent)	1,017	400	389
April 2017 extract	1,607	627	607
SSDI only	854	344	325
SSI (SSI only + concurrent)	753	283	282

Sampling strata	Selected sample size	Original target completed interviews[a]	Actual completed interviews
June 2017 extract	1,849	657	581
SSDI only	922	350	312
SSI (SSI only + concurrent)	927	307	289
July 2017 extract	1,373	573	442
SSDI only	895	315	283
SSI (SSI only + concurrent)	478	258	159
September 2017 extract	1,807	502	512
SSDI only	1,123	274	324
SSI (SSI only + concurrent)	684	228	188
Total	13,271	4,500	4,587
SSDI only	6,807	2,250	2,328
SSI (SSI only + concurrent)	6,464	2,250	2,259

Source: NBS Round 6.

[a]The target completed interviews for the SWS shown here were calculated prior to receiving the first extract, using data from simulated successful worker populations in 2011-12, 2013-14, and 2015-16. In fact, there were actually seven allocations, with a new sample allocation calculated after the population sizes for each extract were revealed. This explains the sometimes large deviation between the target allocation and the actual number of completed interviews.

C.   The NBS-General Waves Questionnaire

The NBS collects data on a wide range of topics—including, employment, disability, experience with SSA programs, employment services used in the past year, health and functional status, health insurance, income and other assistance, and sociodemographic information. Under a separate contract, Westat developed and initially pre-tested the survey items. Mathematica subsequently made revisions to the survey items to prepare the instrument for CATI/CAPI programming and made minor wording changes in response to pre-testing results. For Round 6, we added new questions to the instrument to capture employment within the last six months, benefit suspense, and additional details about employment and health experiences. In addition, we removed some questions regarding current jobs and employment-related services used, and revised a few questions in order to accommodate changes in reference periods and changes in federal programs. The revised survey instrument was pretested to confirm the order, flow, and clarity of the revisions; it is available from SSA (https://www.ssa.gov/disabilityresearch/nbs_round_6.htm).

We divided the questionnaire into 13 sections, labeled A through M.[7]

Section A - Screener. In this section, the interviewer confirms that correct sample person has been contacted and verifies that the sample person is still eligible for the survey. The interviewer also administers a cognitive assessment in this section to ensure that respondents are capable of completing the

---

[7] Sections F and H were deleted from the Round 5 of the NBS–General Waves survey, as they were focused on the TTW program.

interview. Because they are used for survey administration purposes only, items from Section A are not included on the public use file.

Section B - Disability and Current Work Status. This section collects information on the beneficiary's limiting physical or mental conditions and current employment status. We ask about the disability status of the beneficiary by identifying the health condition or conditions that affect the beneficiary's work or daily activities and the age at which the condition first began limiting the beneficiary's activities. Then, we ask questions about the beneficiary's current work status. If a beneficiary is not currently employed, we explore the reasons for not working. If a respondent reports that they have not received SSA disability benefits in the last five years, they are determined to be ineligible for the survey. If an SWS respondent reports that they are not currently working and have not worked in the last 6 months, they are ineligible for the survey. We also ask questions to determine the job characteristics that are important to beneficiaries and collect information about work-related goals and expectations.

Section C - Current Employment. In this section, we collect detailed information about the beneficiary's current job. We ask beneficiaries for information about their job, such as job title, the type of work performed, type of employer, hours worked, benefits offered, and wages earned. These questions are asked for each job that the beneficiary currently holds. We also ask questions about the beneficiary's primary job (if they have more than one job), including questions about work-related accommodations— those received as well as those needed but not received. We ask additional questions to determine if the beneficiary's employer made changes to the workplaces to help the beneficiary work. We also solicit information about job satisfaction.

Section C_B – Employment in Past 6 Months. Questions in this section collect information about employment in the last 6 months, if the respondent is not currently working. We ask beneficiaries for information about all of the jobs they have worked in the last 6 months, including the type of employer; hours worked; wages earned; and the reasons for leaving employment, if applicable. We also ask whether beneficiaries worked or earned less than they could have (and, if so, why) and collect information about their experiences with adjustments to social security benefits due to work.

Section D - Jobs/Other Jobs During 2016. Questions in this section collect information about employment during the 2016 calendar year, excluding jobs noted in Section C or Section C_B. For example, we ask beneficiaries questions about the type of employer; hours worked; wages earned; and the reasons for leaving employment, if applicable. In other questions, we ask whether beneficiaries worked or earned less than they could have (and, if so, why) and collect information about their experiences with adjustments to social security benefits due to work.

Section SC – Benefit Suspense. This section is asked only of beneficiaries who are currently employed, or who have been employed within the last six months or in 2016. It asks beneficiaries how their work experiences have affected their social security disability benefits. Questions in this section differentiate between three types of beneficiaries: 1) beneficiaries who have not received a suspension of benefits because of employment in the past year, 2) beneficiaries who are no longer receiving social security benefits due to recent employment, and 3) beneficiaries who received a suspension of social security benefits because of employment in the past year, but are now receiving benefits again. If beneficiaries are currently experiencing a suspension of benefits, or did so in the last year, we ask them for more information about the factors that affected their benefit receipt, specifically factors related to health, employment, and personal circumstances.

Section E - Awareness of SSA Work Incentive Programs. In this section, we ask questions to assess whether the beneficiary is aware of or is participating in SSA work incentive programs and services.

Section G - Employment-Related Services and Supports Used in 2016. Questions in this section ask beneficiaries about their use of employment-related services and supports in calendar year 2016, including employment, job training, medical, therapy or counseling, and educational services. We also ask sample members about their reasons for, and satisfaction with, services and the nature of any services needed but not received.

Section I - Health and Functional Status. In this section, we ask about the beneficiary's health status and daily functioning, including the need for special equipment or assistive devices. We ask for information about general health status (via the SF-8TM scale), unmet health needs, informal supports, difficulties with activities of daily living (ADLs) and instrumental activities of daily living (IADLs), functional limitations, substance abuse or dependence, and treatment for mental health conditions.[8]

Section J - Health Insurance. Questions in this section collect information about the beneficiary's sources of health insurance, both at the time of interview and during calendar year 2016.

Section K - Income and Other Assistance. In this section, we ask about sources of income, including income received from earnings, social security, workers' compensation, and other government programs and sources.

Section L - Sociodemographic Information. This section collects basic demographic information about the beneficiary, such as race, ethnicity, education, parental education, height and weight, marital status, living arrangements, and household income.

Section M - Closing Information and Observations. In this section, we collect address information for the sample person so that the $30 incentive check may be mailed. The interviewer also records the reasons that a proxy or other assistance was required, if appropriate, and documents special circumstances.

D. Changes to Employment-Related Services

In Section G, we asked respondents to discuss employment-related services and supports they received in 2016, focusing on five types of services – employment, job training, medical, therapy/counseling, and education.

We substantially modified Section G between Rounds 5 and 6 of the NBS. The changes were intended to reduce the administrative complexity of the section, and eliminate questions of limited value in an effort to reduce respondent burden. In Round 5, for each broad service type that respondents said they had ever received,[9] the respondents were asked to identify the name of each service provider and to characterize the type of provider.[10] Later on, after all services and providers were collected at items G1 to G29,

---

[8] SF-8TM is a trademark of QualityMetric, Inc.

[9] These included G1: employment services; G10: training to learn new skills or to get a new job; G15: medical services to improve their ability to work or help them live independently; G19: mental health therapy or counseling to improve their ability to work or help them live independently; and G23: school or classes to get a new job or change careers.

[10] The type of provider choices varied by service type, but they included options like state agency, private business, vocational rehabilitation agency, clinic, hospital, and doctor's office.

respondents were asked about service timing: if they received services from each of the providers in 2015, 2014, or earlier (G30 to G35). Next, respondents who reported receiving services in 2014 were asked to identify the specific services they received from each provider in 2014 at G36.[11] Lastly, respondents were asked about service intensity for each provider in 2014 (G37 to G39).

For Round 6, we streamlined the instrument by making the following changes:

- We asked only about services received during 2016, and not those ever received.

- For each of the five broad service types (employment services, training to learn new skills or to get a new job, medical services to improve the ability to work or live independently, therapy or counseling, and school or classes), we asked whether specific services that fall under the broad headings (previously asked about at item G36) were received in 2016. The specific service questions are now G2 (employment services), G11 (training), G16 (medical services), G20 (therapy/counseling), and G23 (school/classes).

- Rather than recording and enumerating the specific providers from which sample members received services, we asked about the types of providers from which the services were received in a check-all-that-apply format. The provider type questions are items G7, G13, G18, and G22.

- We removed questions about service intensity (G37 through G39 for each provider).

Because of the changes to Section G in the Round 6 instrument, we needed to re-specify all of the constructed variables that are based on Section G questions. In Round 5 (and earlier) of the NBS, we used three types of summary-level constructed variables based on Section G providers and services:

- **Ever Used [Provider Type].** These are based on G1 to G29 and describe if the respondent ever used a certain type of provider. For example, C_EVRUSESVR (state vocational rehabilitation agency) and C_EVRUSEWEL(state welfare agency).

- **Used [Provider Type] in 2014.** These are based on G1 to G29 and the timing questions (G30 to G35) to describe if the respondent ever used a certain type of provider during 2014. For example, C_USESVR2014 (state vocational rehabilitation agency), and C_USEWEL2014 (state welfare agency).

- **Received [Service Type] in 2014**. These are based on G36 (received service type in 2014) and describe if the respondent ever received a certain type of service in 2014. For example, C_PHYTH2014 indicates if a respondent received physical therapy in 2014 and C_OCCTHER2014 indicates if a respondent received occupational therapy in 2014.

For Round 6, we changed the constructs in the following ways:

- **Ever Used [Provider Type].** These variables will not be created because the revised Section G only asks about 2016 experiences.

- **Used [Provider Type] in 2016.** These are now based on each of the provider type questions under each of the main five service type series of questions. For example, C_USESVR2016 is based on G7_1 (employment services received at vocational rehab agency) and G13_1 (training services

---

[11] The types of services received choices in Round 5 included physical therapy, occupational therapy, speech therapy, special equipment or devices, person counseling or therapy, group therapy, medical services, a work or job assessment, help finding a job, training to learn a new job or skill, advice about modifying their job/workplace, and on-the-job training/job coaching/support services.

received at vocational rehab agency). C_USEWEL2016 is based on G7_2 (employment services received at a welfare agency) and G13_2 (training services received at a welfare agency).

- **Received [Service Type] in 2016.** These are no longer based directly on one multi-part question (G36) as in Round 5, but are based on the service type sub-items under each of the five main service type series of questions. For example, C_PHYTH2016 is based on G16_a (physical therapy received in 2016) and C_OCCTHER2016 is based on G16_b (occupational therapy received in 2016).

Given the extensive changes between Section G of the Round 6 NBS and earlier versions of the NBS, we do not recommend making any comparisons between the 2016 Section G variables (or constructed variables) to the earlier rounds of the NBS. We have revised the name of the constructed variables to include "_rev" to indicate the revisions and to discourage such comparisons.

Table I.2 includes a comprehensive list of the constructed variables from Section G for Round 6 of the NBS.

Table I.2. Section G constructed variables for the Round 6 NBS

Constructed Variable	Label/Description
Used [Provider Type] in 2016	
C_UseSVR2016_rev	Used state VR in 2016
C_UseWel2016_rev	Used state welfare in 2016
C_UseSMenH2016_rev	State mental health was provider in 2016
C_UseOthSt2016_rev	Used other state provider in 2016
C_UsePriv2016_rev	Used private business in 2016
C_UseOthNonSt2016_rev	Used other Non-state provider in 2016
C_UseUnemp2016_rev	Used state employment/ Unemployment office in 2016
C_UseSchool2016_rev	Used school or college in 2016
C_UseClinic2016_rev	Used clinic/hospital/MD office in 2016
C_UseRehab2016_rev	Used rehab center in 2016
C_UseOthMed2016_rev	Used other medical or mental health provider in 2016
C_EmpUnkwn2016_rev	Employment/training provider type unknown in 2016
C_MedUnkwn2016_rev	Medical/Mental health provider unknown in 2016
C_UseEmploy2016_rev	Used employment services in 2016
Received [Service Type] in 2016	
C_ServUse2016_rev	Received employment-related supports and services in 2016
C_PhyTh2016_rev	Received Physical Therapy in 2016
C_OccTher2016_rev	Received Occupational Therapy in 2016
C_SpchTher2016_rev	Received Speech Therapy in 2016
C_Equip2016_rev	Received Special Equip in 2016
C_Coun2016_rev	Received Personal Counseling in 2016
C_GrpTh2016_rev	Received Group Therapy in 2016
C_WrkAs2016_rev	Received Work Assessment in 2016
C_FindJob2016_rev	Received Help Finding Job in 2016
C_JobTrn2016_rev	Received job training for new job/skill in 2016

Constructed Variable	Label/Description
C_JobMod2016_rev	Received Advice about modifying workplace in 2016
C_JobCch2016_rev	Received job coaching /support services in 2016
C_JobOJT2016_rev	Received on-the-job training services in 2016
C_RxMed2016_rev	Received prescription medications in 2016
C_OtherServ2016_rev	Received something else in 2016

E. Variable Changes Between Round 5 and Round 6 Public Use Files

In Table I.3 we list important changes between the variables contained in the Round 5 and Round 6 public use files. This table is intended to assist researchers who may be using both datasets.

Table I.3. Variable changes between Round 5 and Round 6

Round 5 Variable	Round 6 Variable	Round 5 Variable	Round 6 Variable
Change Status: dropped for Round 6			
Reason: question or item removed			
R5_B41	N/A	R5_C27	N/A
R5_B42	N/A	R5_C39_I	N/A
R5_B43	N/A	R5_C39_J	N/A

F. File Content and Technical Specifications

The NBS-General Waves Round 6 public use file contains 8,589 records and 958 variables. Variables are positioned on the file in the following order:

Survey administration variables. These variables are related to survey administration, including respondent type identifiers and other variables associated with conduct of the survey.

Sampling variables and weights. These variables include administrative variables used for sampling purposes and administrative data that provide additional descriptive information about the sample. See Table I.4 for a list of variables that contain SSA administrative data.

Variables from Sections A through M of the NBS questionnaire. These variables are ordered within each section by related questionnaire item number. Constructed variables created from source variables within a section are ordered at the end of each section. One constructed variable in the public use file contains information from SSA administrative data. See Table I.4 for this variable.

SSA administrative data. These variables include a select set of data from SSA administrative records to enhance analyses. See Table I.4 for a list of variables that contain SSA administrative data.

The public use file is available in a SAS "sas7bdat" format database and has the following technical specifications:

- Data set name: R6NBSPUF
- Number of observations: 8,589
- Number of variables: 958
- Date last created: March 9, 2021

Table I.4. NBS–General Waves Round 6 variables containing SSA administrative data in the public use file

Variable	Variable label
Sampling Variables	
R6_ORGSAMPINFO_BSTATUS	Sample Benefit Type (From SSA administrative records)
R6_ORGSAMPINFO_Hispanic	Sample Hispanic or Non-Hispanic (From SSA administrative records)
R6_ORGSAMPINFO_SEX	Sample Sex (From SSA administrative records)
R6_ORGSAMPINFO_SWS_Sample	SWS Sample (=1) or not (=0)
R6_A_Strata	Analytical strata for variance estimation using SUDAAN.
R6_A_PSU_PUB	Analytical PSU scrambled (Public)

Variable	Variable label
Constructed Variables	
R6_C_TotGovCashBen_PUB	Total Government Cash Benefits Recvd (Includes SSA administrative records) (Public)
SSA Administrative Variables	
R6_N_BENSTATATINT2	Beneficiary status at Interview, if missing then at samp info used (From SSA administrative records)
R6_N_DAC	Disabled Adult Child (From SSA administrative records)
R6_N_DEPENLASTMNTH_PUB	SSDI dependent benefit payment amount last month (From SSA administrative records) (Public)
R6_N_IMP_CIRC	Circulatory impairment (From SSA administrative records)
R6_N_IMP_ENDO	Endocrine impairment (From SSA administrative records)
R6_N_IMP_ID	Intellectual disability (From SSA administrative records)
R6_N_IMP_INJ	Injury or poisoning (From SSA administrative records)
R6_N_IMP_MISSING	Missing impairment (From SSA administrative records)
R6_N_IMP_MUSC	Musculoskeletal impairment (From SSA administrative records)
R6_N_IMP_NEO	Neoplasm (From SSA administrative records)
R6_N_IMP_NERV	Nervous system impairment (From SSA administrative records)
R6_N_IMP_OTHER	Other impairment (From SSA administrative records)
R6_N_IMP_PSYCH	Psychiatric impairment (From SSA administrative records)
R6_N_IMP_RESP	Respiratory impairment (From SSA administrative records)
R6_N_IMP_SENS	Sensory impairment (From SSA administrative records)
R6_N_MTHSEARLENT_PUB	Months Since Earliest SSI or SSDI Entitlement Date (From SSA administrative records) (Public)
R6_N_MTHSRECENT_PUB	Months Since Most Recent SSI or SSDI Entitlement Date (From SSA administrative records) (Public)
R6_N_PIAATINT_PUB	Primary Insurance Amount (PIA) (From SSA administrative records) (Public)
R6_N_RepPayee	Representative Payee (From SSA administrative records)
R6_N_SSDILastMnth_PUB	SSDI payment last month (From SSA administrative records) (Public)
R6_N_SSDINOMCR_ATINT	SSDI no Medicare at Interview (From SSA administrative records)
R6_N_SSILastMnth_PUB	State and federal SSI payment last month (From SSA administrative records) (Public)
R6_N_STW_AtInt	SSA benefits are in suspense or terminated because of work at interview (From SSA administrative records)
R6_N_STW_EVER	Ever experienced suspense or termination of cash benefits due to work (From SSA administrative records)
R6_N_TotSSbenLastMnth_PUB	Total SSI and SSDI payment last month (From SSA administrative records) (Public)
R6_N_TTWPARTEVER	TTW participant ever (From SSA administrative records)
R6_N_MEDEX_1606	Medical improvement indicator at sampling (From SSA administrative records)
R6_N_MEDEX_ATINT	Medical improvement indicator at interview (From SSA administrative records)

G.   Codebook Documentation

To aid the user, this codebook provides extensive documentation for each variable on the file including:

- *Variable Name.* The variable name as it appears in the data file
- *Question Number.* Hardcopy question corresponding to the variable
- *Label.* Variable label (a brief description of the variable)
- *Question Universe.* Indicates which respondents were eligible to be asked the question
- *N.* Total number of observations on the data file
- *Question Text.* The text of the question as it appears on the survey instrument (English only)
- *User Notes.* Provides additional information to the user regarding the variable
- *Construct Specs.* Provides specifications used to create the constructed variables
- *Eligible.* The number of cases eligible to receive the item (Excludes logical skip and partial not asked the item)
- *Width.* Width of data associated with the variable
- *Type.* The type of data (numerical or an character)
- *Format.* SAS format assigned for value labels

Additionally, we display unweighted frequencies for all categorical variables and unweighted means for continuous variables. For ease of use, frequencies are suppressed when the frequency display would continue on more than one page (for example A_STRATA).

For items where a frequency distribution is displayed, frequency counts, numeric values and their labels, and row percentages and cumulative percentages are displayed. For items where a mean is displayed, minimum and maximum values, standard deviations, median, missing (the number of cases with missing data for the item), and base N (the number of cases with data for the item) are also displayed.

The data user should refer to the General Waves--National Beneficiary Survey Round 6: User's Guide for Restricted and Public Use Files (Callahan et al. 2019) for information about study methodology, file and variable construction, and use of sampling weights.
